

Incident Response *"Quick-Action" Guide*

CROSHOP PVT. LTD.

Section 1: The "Is it an Incident?" Checklist

- **Unauthorized Access:** Someone logged into the banking portal or WhatsApp from an unknown device.
- **Data Loss:** Master Patterns or Payment Logs have been deleted or encrypted (Ransomware).
- **Identity Theft:** An artisan's account is sending spam or phishing links to the group.
- **Hardware Loss:** A company laptop or POS terminal is lost or stolen.

Section 2: Phase 1 – Immediate Containment (Minutes 0-15)

Goal: Stop the bleeding.

1. **Isolate:** If a laptop is suspected of malware, disconnect from Wi-Fi immediately. Do not shut it down (to preserve volatile memory for forensics).
2. **Lockdown:** Change the "Master Password" for the affected service (e.g., Google Workspace, Banking Portal).
3. **Log Out:** Use the "Sign out of all sessions" feature in Google/Microsoft settings to kick out any unauthorized users.

Section 3: Phase 2 – Internal Reporting (Minutes 15-60)

Goal: Notify the decision-makers.

- **Primary Contact:** Call/Message the Founder immediately.
- **Secondary Contact:** Notify the Lead Coordinator to pause WhatsApp group activities until the "All Clear" is given.

- **Documentation:** Take screenshots of any error messages, ransom notes, or suspicious login alerts. Do not delete evidence.

Section 4: Phase 3 – Recovery & Communication (Hours 1-4)

Goal: Restore operations safely.

1. **Backup Restore:** Only restore Data (DS-01/DS-02) from the "Last Known Good" cloud backup after the vulnerability (e.g., weak password) has been fixed.
2. **Artisan Update:** Send a verified message to the artisan network: "We are investigating a technical issue. Please do not click any links sent in the last 2 hours."
3. **Password Reset:** Enforce a mandatory password update for all users involved in the breach.

Section 5: Emergency Contacts

Founder: XXXXX

Bank Fraud Dept: XXXXX

Web Hosting Support: XXXXX

Local Police (Non-Emergency): XXXXX

Aligned with **NIST CSF 2.0: RS (Respond)** and **RC (Recover)**. This guide establishes a formal communication and containment protocol to protect Croshop's decentralized workforce.
